

Complete Listing of All Claims:

Claim 1 (original). An improved clothing hanger adapted for personal use comprising a triangular rigid upper part adapted to receive a shirt, coat, blouse or the like, the upper part having attached thereto a closet rod hanging means or hook, the hook having attached thereto a text messaging means for communicating instructions to a person, a transparent or translucent container means detachably connected to the upper part, the container means being adapted to hold articles of clothing such as underwear, belts, scarves, socks and the like, at least one horizontal bar attached to the upper part and located underneath the container means, the horizontal bar being adapted to support a pair of trousers, a dress, a skirt, or a plurality of such items.

Claim 2 (original). An improved method for coordinating a process of dressing a person comprising the step of using the hanger described in claim 1.

Claim 3 (new). A clothing hanger for holding clothing, the clothes hanger marked to indicate a specific day, the clothing hanger comprising a rigid upper part and a rigid lower part attached to the upper part, the upper part having attached thereto a hanging means for hanging said hanger, a transparent container detachably connected to the clothing hanger, the lower part comprising a horizontal bar for supporting clothing, the hanging means having attached thereto a messaging means for communicating instructions to an impaired person for dressing using clothing on the hanger and in the transparent container.

Claim 4 (new). The clothing hanger according to claim 3 wherein the messaging means comprises a communications module actuated by motion.

Claim 5 (new). The clothing hanger according to claim 4 wherein the communications module is an electronic digital voice recorder with a recorded instructional message in a voice familiar to the user.

Claim 6 (new). The clothing hanger according to claim 5 wherein the electronic communications module is a wireless digital receiver and audio transmitter adapted to receive and repeatedly play an pre-recorded message wirelessly transmitted from a wireless digital signal source.

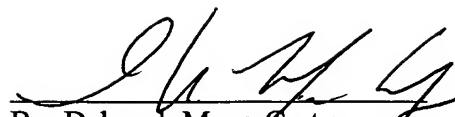

Claim 7 (new). The clothing hanger according to claim 6 wherein the wireless digital signal source is a home computer connected to a wireless network and wherein the electronic communications module is connected to said wireless network.

Claim 8 (new). The clothes hanger according to claim 7 wherein the clothes hanger is disposable.

Claim 9 (new). The clothes hanger according to claim 3 wherein the communications module is manually actuated.

Claim 10 (new). The clothes hanger according to claim 3 where the communications module is automatically actuated by exposure to a selected light intensity.
